 **TOPCON**

Focused on the edge, add precision guidance to all of your earthmoving fleet

Any edge, any machine

3D-MC Edge is a configuration within the 3D-MC environment that focuses only on the cutting edge of a machine.

Enabling precision from the first cut

This configuration is perfect for machines performing rough grading operations and mass earthmoving tasks. These vehicles and attachments can range from wheel tractor-scrappers, tow-behind scrapers, push dozers, soil compactors and motor graders.

Choose your level of control and precision

A 2D solution will allow you to work with Sonic, Laser, or slope inputs, and indication solutions will give you the freedom to push dirt by feel. Or if you need to know your exact position on the site and prefer to let the machine automatically follow the grade design, put 3D-MC Edge in 3D Automatic mode and reduce your end-of-the-day fatigue levels.

- » Accurate and validated work with less rework
- » Modular components can grow as your project needs and fleets grow
- » Track and measure all activities and amount of material moved
- » Easy connectivity for instant data transfer and screen sharing

You can have it your way

Contact one of our dealers today to check machine compatibility and start the tailoring process for your fleet.
